Custom Control Systems

Gammill Electric is a master designer and builder of industrial, commercial, and municipal control systems. Gammill is UL-508 certified to provide world-class solutions to a wide range of control system requirements. As a licensed electrical contractor, Gammill also delivers turnkey installation and technical support services.

INDUSTRIES SERVED

Water treatment
Chemical processing
Aerospace
Petroleum
Food and beverage
Material handling
Industrial machinery
Metals processing
Plastics manufacturing
Paper and printing
Environmental
Kilns and furnaces
Heating and refrigeration

Typical control panel

Gammill Electric provides high quality control systems that save time and money.

For more than 35 years, Gammill has delivered world-class control systems for many demanding applications. Every project begins with a thorough analysis of technical requirements and business needs. High quality engineering and craftsmanship are then built into every control system. Full testing and turnkey installation by Gammill eliminates risk and saves time. And all this expertise is often very competitive with the cost of doing the work in-house.

Atmosphere control system

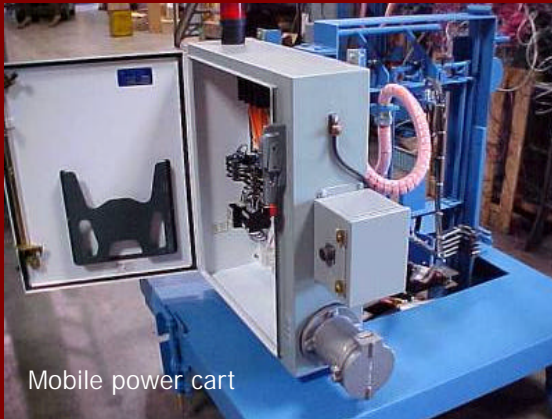

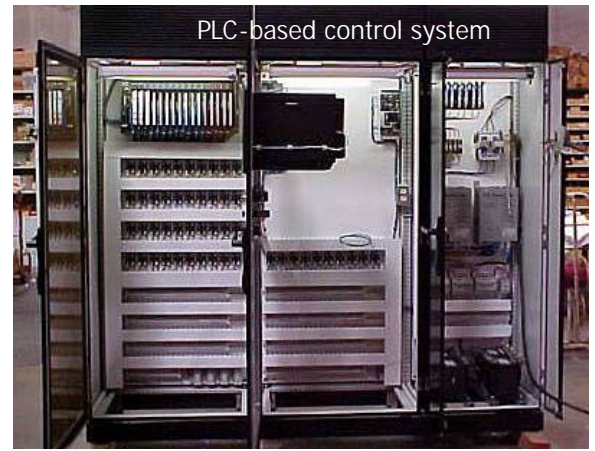

CONTROL PANEL EXPERTISE

Discrete instrumentation-based systems
PC and PLC-based systems
Power panels
Pneumatic controls
Motor controls
Atmosphere mixing and regulating
Explosion-proof panels
Watertight panels
Corrosion resistant systems

Control systems and services provided by Gammill include:

- Complete equipment specification development
- Custom control panel engineering and fabrication
- PLC/HMI software programming of all major brands
- UL 508 custom control and power panel shop
- Site management services to ensure total project success
- Installation and integration of control equipment
- Troubleshooting and emergency repair
- Scheduled maintenance and calibration
- Control system modernization
- Permitting assistance
- Third-party compliance upgrades

Gammill has expertise with all major brands of control equipment and PLC/HMI software, providing high quality systems that satisfy the unique requirements of each customer.

The solutions provided by Gammill are often very competitive with the cost of doing the work in-house.

Experience the Gammill Electric Difference

Gammill specializes in helping you find the most reliable and cost effective solutions to satisfy all your power and control requirements, both current and future.

Gammill approaches every project with a thorough analysis of all your technical and business needs. Master engineers and craftsmen then deliver optimized solutions that reduce installation, operation, and maintenance expense. 95% of Gammill's projects were completed on time during the past five years, and Gammill has a solid reputation of delivering solutions that meet or exceed performance expectations.

In addition to custom control systems, Gammill also provides a wide range of power generation and energy efficiency solutions that solve many power-related problems while dramatically reducing ongoing energy costs. Contact Gammill today to learn how you can take advantage of the most current technologies and financial incentives.

Contact Gammill Electric today for a prompt and professional evaluation of your needs.
